

Sequence of Operation

When the occupancy sensor in the room senses movement, receptacles will automatically turn on. The switch on the wall will be used to turn the lights on or off regardless of the state of the occupancy sensor. A quick press up or down of the switch will turn the lights on or off. A press and hold up or down will dim the lights up or down. When the room becomes vacant, the lights and receptacles will turn off after a predetermined amount of time (default 15 minutes). When a Demand Response event is triggered the lights will dim down to a predetermined level.
